

Contents

PART ONE

The intelligence revolution: setting the scene 1

- 01 The transformative impact of the intelligence revolution 3
 - The evolution of tuna fishing 3
 - Introducing the intelligence revolution 5
 - What is AI and why is it so transformative? 8
 - About this book 9
 - Endnotes 11

- 02 How we got to the intelligence revolution 12
 - Defining artificial intelligence 13
 - 9 ways machines are already more human than you might think 13
 - What all this means in practice – two case studies 21
 - So how did we get here? 24
 - Endnotes 27

PART TWO

Artificial intelligence in business 29

- 03 Artificial intelligence in business 31
 - Which area should you look at first? 32
 - Creating more intelligent products 35
 - Delivering more intelligent services 39
 - Making business processes more intelligent 41
 - Endnotes 44

- 04 Using AI to make more intelligent products 46
 - Why the rise of smart products matters to your business 47
 - Smart products in the home 48
 - Smart products for mobility and transport 51
 - Smart products for industry and manufacturing 54

- Smart products for sports and exercise 57
- Smart products for the health sector 58
- Endnotes 60

- 05 Using AI to provide more intelligent services 63
 - Why your services need to get smarter 63
 - Taking a leaf out of the tech world's book 64
 - Other intelligent services in action 67
 - Endnotes 76

- 06 Using AI to improve your business operations and processes 78
 - Why apply AI to your business operations and processes? 79
 - Starting with robotic process automation 80
 - Real-world examples of AI-enhanced business functions 82
 - Endnotes 94

- PART THREE
- Getting ready for the intelligence revolution 97

- 07 Finding the AI opportunities in your business 99
 - Forget the technology, AI Starts with strategy 99
 - Pinpointing the AI opportunities in your business 102
 - Learning from other businesses that have been on this ai journey 107
 - Transitioning to an AI business – will it change your entire business model? 109
 - Endnotes 112

- 08 Addressing people and culture needs 114
 - How the world of work will change 115
 - Building the right technical skills 121
 - Building the right soft skills 128
 - Building an AI culture in your organization 131
 - Endnotes 136

- 09 The need for ethics, trust and transparency 138
 - The dangerous side of AI: how AI can be misused 139

	The days of trampling over individual privacy and being less than transparent are over	141
	The ‘black box’ problem: or, how we don’t really understand how AI works	143
	Avoiding biased AI	145
	Problems around AI security and hacking	147
	Facing up to the climate impact of AI	147
	The ethical human–robot relationship	149
	Putting it all into practice: using AI ethically in your business	149
	Endnotes	153
10	AI needs data (lots of data)	156
	Revisiting the incredible growth in data	156
	What type and how much data do you need?	159
	How to find the right data	161
	Getting your data fit for use	166
	Endnotes	169
11	The need for a technology overhaul	171
	Linking technology needs to the four layers of AI and data	172
	Taking into account your industry-specific needs	175
	A (brief) look at hardware requirements for AI	175
	Tapping into AI-as-a-service	176
	Endnotes	183
12	Leadership challenges in the intelligence revolution	184
	It’s your role to approach AI strategically	185
	Leading people through the changes	186
	What do the successful leaders of the future look like?	188
13	A look ahead	192
	Is AI the biggest opportunity we’ve ever had?	193
	AI as a force for good	193
	Some big changes will be needed	195
	Staying in touch	197
	Endnotes	197
